Ivan Haritonovici

Real-Time Simulation, Visualization & High-Performance Interactive Systems

Greater Seattle Area

Summary

15+ years. 48M+ users. 550+ simulated environments. From blank repository to global production. I am a Principal Engineer who turns ambitious real-time products into stable, scalable platforms. I define architecture, build critical technology, lead engineering teams through execution, and deliver under real production pressure. My work spans simulation, interactive 3D, graphics, physics, networking, backend systems, professional tooling, CI/CD, performance, and cross-platform delivery. I connect these disciplines into one coherent production system—so teams move faster, complexity stays under control, and products scale reliably. I have built technology behind global sports simulation and online products used by millions. My strength is transforming technical complexity into clear architecture, decisive execution, reliable delivery, and platforms that support engineering, content, marketing, and long-term product growth. I build real-time systems that scale from the first architectural decision to millions of users.

Experience

Trackman

8 years 10 months

Principal Engineer

June 2026 - Present (2 months)

Seattle, WA

Technical Lead

May 2022 - June 2026 (4 years 2 months)

Tokyo, Japan

- Served as the primary engineering force behind Virtual Golf 3, establishing architecture and building core systems.
- Defined technical direction and led the team from early development through production delivery.

- Coordinated cross-functional workflows for content, design, QA, and marketing teams to enhance efficiency.
- Delivered a stable and scalable virtual golf platform supporting Trackman's global simulator ecosystem.

Senior Programmer

January 2021 - May 2022 (1 year 5 months)

Tokyo, Japan

- Developed and maintained production-critical systems for Trackman's virtual golf technology.
- Solved complex problems across gameplay, simulation, graphics, and multiplayer components.
- Enhanced system reliability and developer workflows, laying the groundwork for Virtual Golf 2.
- Took ownership of architecture and cross-team technical decisions to improve overall performance.

Senior Programmer

October 2017 - November 2021 (4 years 2 months)

United States

- Led the technical transition from Perfect Golf to Trackman Virtual Golf, enhancing gameplay through advanced simulator technology.
- Developed a new user interface and rebuilt key gameplay systems to integrate seamlessly with Trackman hardware.
- Preserved proven technology while redesigning systems to align with Trackman's product ecosystem.

PERFECT PARALLEL, INC.

Lead Programmer

October 2012 - October 2017 (5 years 1 month)

New York, NY

- Took technical ownership of Perfect Golf, transforming its course editor into a production tool for professional designers.
- Developed the core product, including engine architecture, gameplay, networking, and realistic golf physics within six months.
- Built and led the programming team while maintaining technical direction through Steam Early Access and full release.

Endnight Games

Graphics Programmer

March 2015 - July 2015 (5 months)

New York City Metropolitan Area

- Contributed to the rendering engine of The Forest, focusing on post-processing and shaders.
- Developed visual effects and graphics tools to enhance the game's unique atmosphere.
- Collaborated closely with the art team to streamline the production of visuals.

Step Evolution

Graphics Programmer

October 2014 - December 2014 (3 months)

New York City Metropolitan Area

- Developed innovative procedural "demoscene" shaders and post effects to enhance visual experiences.
- Created stunning background effects utilizing advanced particle and shader systems.
- Collaborated with a dynamic team at Step Evolution, a startup focused on pushing the boundaries of graphics programming.

Absolutsoft

2 years 8 months

Lead Programmer

October 2010 - October 2012 (2 years 1 month)

Saint Petersburg, Russian Federation

- Developed Contract Wars as a comprehensive online FPS, establishing the technical foundation and engine architecture.
- Expanded and led the engineering team while maintaining ownership of the architecture and technical direction.
- Achieved over 2M subscribers and 1,000 concurrent players within 18 months, contributing to a product that reached 48M+ players globally.

Graphics Programmer

March 2010 - October 2010 (8 months)

St Petersburg

- Extended CryEngine's rendering pipeline to enhance the visual identity of a dark post-apocalyptic world.
- Designed and implemented Normal Ambient Light and Parallax Decals to create immersive environments.
- Improved shadow cascades and point-light shadows, optimizing SSAO for better performance.

- Enhanced particles and post-processing effects, resulting in detailed damaged surfaces without heavy geometry reliance.

Education

ITMO University

Bachelor's Degree, Engineering and Technology · (2007 - 2010)
